Alteraciones en la dentición primaria:

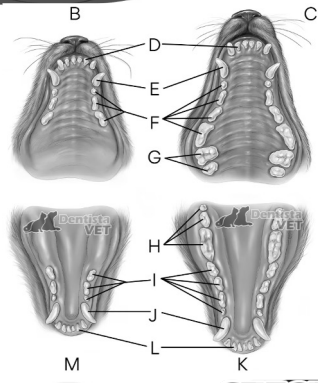

- no erupción (impactada o ausente)
- retraso en la erupción
- anomalías dentales (agenesia, supernumerario, malformación)
- Traumatismos (fracturas; pulpitis)
- retraso en la persistencia de la exfoliación
- maloclusión

CTEON

13

	erupción
Incisivos	3 a 5 sem
Caninos	3 a 6 sem
Pré-molares	4 a 10 sem
Molares	---

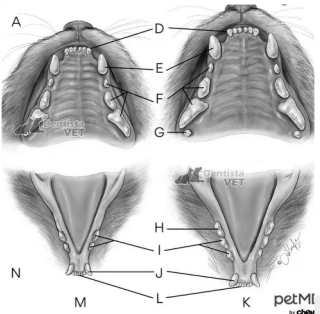

Fórmula dental - Decíduos
 $2 \times (3/3 I, 1/1 C, 3/3 PM) = 28$

Alteraciones en la dentición permanente:

- Agenesia (más común en razas pequeñas)
- erupción retardada (retención o impactación prolongada)
- anomalía de forma, número y tamaño
- mal posicionamiento
- fracturas con o sin exposición pulpar
- hipoplasia del esmalte y/o hipocalcificación

CTEON
